

OPERATION & MAINTENANCE MANUAL

Aluminium Gates | Aluminium Fencing

INTRODUCTION

Aluminium gates and fencing are supplied to give many years of low maintenance with no rust or corrosion due to the materials being aluminium and Qualicoat marine grade powder coated to give resistance to harsh weather conditions.

USAGE

Designed for residential usage with hardwearing aluminium powder coated profiles and gate hardware. Open & closing of the gates should be done with care and normal force and avoid slamming of the gates. Be careful when using gates in windy or inclement conditions and always be beware of wind forces, keep shut or use the hold back catches to hold gates open when using, always close gates in the shut position when not in use.

CLEANING

Regular cleaning of the elements is essential for extending their service life. Which technique to use?

Non-abrasive sponge (important if you do not want to scratch your fence)
Warm water with inert detergent (pH5 to 7)
Rinsing with clear water without additives
It or any other products that may harm the paint.
Be careful if using a pressure washer too much pressure can damage your fence elements.

MAINTENANCE

To keep the gates working and operating efficiently, regular service schedule should be done on a 6 month / annual basis agreed with your installer or maintenance department.

Regularly use a silicone / lubricant spray on all moving parts, locks, handle joints and hinges.

Advise your local maintenance department or installer of any faults or operational issues immediately.
